Holden Dynamics are true "Internet Veterans", being around from the earliest days of its release in the "mainstream".

Our incorporation and Internet domains predates most of Australia's largest Internet companies, including Webcentral, MelbourneIT and Netregistry.

We have had extensive experience at Website development, from very early coding by hand to project managing Australia's first "secure" ISP, to recently setting up the entire "Web and SEO Development Division" of a prominent Internet Security company in Asia.

We have mentored and helped create many Internet based ventures for successful companies and entrepreneurs !

We are all dedicated Internet enthusiasts, actively helping to take the Internet to the next levels.

"There's no substitute for extensive practical experience" !
