[Holden Dynamics](http://www.holdendynamics.com) actively promotes "Open Source Software" [Open Source Software](http://en.wikipedia.org/wiki/Open-source_software) is Software whose programming code is freely available. This allows for further development by others, and also represents a safe solution for the future, for companies and organisations - in that the source code is available for the client to keep/archive as an insurance. [Open Source Software](http://en.wikipedia.org/wiki/Open-source_software) such as "Open Office" - a free alternative to Microsoft Office - and unlike "proprietary software" - is forwards and backwards compatible. A great bonus for companies and organisations that want to access material from years gone past or well into the future.
Holden Dynamics Pty Ltd - Managing Director, **Carl Holden**, was elected to the Board of the [Open Source Industry Australia](http://www.osia.net.au), and by invitation was asked to Chair the "**Government Relations**" Portfolio.
